→ EPEAT IE-TV Training Program

EPEAT staff have been developing and revising Protocols for both the Imaging Equipment and Television standards, to guide manufacturer Subscribers in registering new products when the new registries go live.

With that process well underway, we have prepared a series of training options to support new and existing Subscribers through orientation to the EPEAT system and the specifics of the new standards. Those options are outlined in this email - and detailed online.

See specifics on attending and detailed calendar, or sign up for an RSS feed of all training announcements on our [Training](#) page.

Director of Outreach and Communications

→ Introductory Trainings

We will provide two one-hour introductory sessions introducing the EPEAT system to those not yet familiar with its details. Each will be presented twice live, and recorded for online access.

General EPEAT Orientation An overview of the EPEAT system for those unfamiliar with the details of how the system was developed, how manufacturers participate, how the registration process works, what purchasers use the system in their procurement, etc. ****FIRST SESSION Oct 5, 3 PM EDT**** [Join this session](#)

Becoming an EPEAT Subscriber The steps a manufacturer must take to become an EPEAT Subscriber, including enlisting a Product Registration organization. We'll look at PRE options and other resources available to Subscribers, review the implementation schedule for 1680.2 and .3, and explore possible promotional opportunities.

Criteria Training

These standard-focused trainings will bring Subscribers up to speed on the declaration and evidence requirements for successful product registration.

Criteria Cluster Trainings Recorded trainings will cover one section of a standard at a time - e.g. all 1680.2 Design for End of Life criteria. We will post our eight recorded presentations for Imaging Equipment/IEEE 1680.2 on Thursdays starting October 4th. A series of eight recorded Television/IEEE 1680.3 webinars will begin posting November 19.*

Individual Criteria Modules When protocols for both the standards are finalized and the registration software is locked down, EPEAT will provide criteria modules with a quick view of each individual criterion - requirements, acceptable evidence, how to declare in the registry software. These will be available for use by all Subscriber staff with an EPEAT username and password. (Links will also be posted in the registry application for quick reference during registration.)

Training Access

Live training will be presented through Go To Webinar sessions, and all recorded training decks will be made available through our new training application. To register, or sign up for an RSS feed for all training announcements, please visit our Training page.

Introductory sessions ('EPEAT Orientation' and 'Becoming an EPEAT Subscriber') are free of charge and open to all interested parties.

Criteria Cluster Trainings are open to Subscribers free of charge and to others at a per person charge of \$20 per single session or \$100 for the full 8 session course. Those who sign up for the full course may access the full training functionality - post questions to Q&A, take tests and record their completion of the units. Please email [Andrea Desimone](mailto:Andrea.Desimone) to register.

Individual Criteria Modules are restricted to Subscribers registering products in the EPEAT system. Links will become available in the "My Account" section at epeat.net beginning on November 23rd.

We encourage all manufacturers who plan to join EPEAT as Subscribers to sign up early under the extended term offer available to new Subscribers* and access the criteria training materials for free.

* New Subscribers who sign up and pay in advance of the registry launch(es) are eligible to participate in the EPEAT system immediately - accessing free

training, publicly claiming Subscriber status, providing comment on registry design, etc - and their annual payment term will not begin until the public registry launch (Jan 18 for IE, March 4 for TV).
