

TECHNOLOGY POLICIES CAN HELP PERFORMANCE AS WELL AS THE PLANET

Become an EPEAT Government Purchaser and get public recognition for your green initiatives.

EPEAT® is the definitive global rating system for greener electronics. Thousands of products designed to meet stringent environmental criteria are registered in EPEAT, the leading resource for finding technology designed to minimize impact on the planet. EPEAT-registered products adhere to the latest ENERGY STAR® specifications and are designed, manufactured and produced in a way that reduces toxic content and solid waste, decreases emissions and increases recyclability.

Lead by Example

The EPEAT system covers more than 40 countries, enabling purchasers in dozens of geographies to use EPEAT as a uniform specification and send a consistent signal to manufacturers to create “greener” products. EPEAT’s searchable database includes thousands of PCs, monitors, printers, copiers and televisions from more than 50 manufacturers, more than any other environmental rating system.

Using the EPEAT registry, agencies can select products that help meet their sustainability and budgetary goals while helping to reduce the negative impacts of electronics manufacturing, use and disposal. Eight national governments and hundreds of local governments worldwide already use EPEAT to compare electronics and make informed purchasing decisions.

EPEAT is open to manufacturers of all sizes and nationalities, so establishing an EPEAT specification need not disadvantage local suppliers. The tiered rating system provides incentive for environmental performance while allowing for ease of entry. EPEAT registration can also facilitate entry into other markets.

Government Purchaser Program

When you use EPEAT to purchase greener electronics, be sure to get the recognition you deserve and the resources you need by joining our Government Purchaser program. Access EPEAT’s learning resources and connect with a global network of purchasers promoting development of environmentally preferable electronic products and services. In addition, your agency will be recognized on the EPEAT website and positioned as an environmental leader in media outreach materials and case studies.

Why EPEAT?

Only EPEAT combines comprehensive criteria for design, production, energy use and recycling with ongoing independent verification. It’s an easy-to-use resource for governments looking for high-performance, environmentally preferable products.
